

## X-VISUAL TECHNOLOGIES

X-Visual Technologies combines engineering competence and Visio know-how in a high-quality application for engineering, installation and documentation in the construction of process plants. Since 2004 the company has been located in the economic and science center Berlin Adlershof, the most modern science and technology park in Germany.

### Company Philosophy

Current developments in the economy make clear how important innovation is. Lean processes and comprehensive quality standards are basic conditions for the market success of an enterprise. With regard to the construction of process plants this means, above all, an efficient integration of the various work processes. Within the company, flexible software solutions allow significant process optimization to be achieved. Resources can be saved by the introduction of company-wide standards, resulting in competitive advantages. X-Visual Technologies confronts these challenges with the following key competencies:

- Technical competence in the construction of process plants, comprehensive development experience with Microsoft Office Visio®, focus on customer requirements, motivation, creativity and innovativeness, as well as flexibility
- Long-term securing of the technological and quality lead of your firm due to:
  - Maintaining quality standards throughout the company
  - The saving of resources
  - Maximum results thanks to as much as 60% time savings
  - Increased efficiency throughout the whole project cycle
- Continual transfer of knowledge and technologies with international companies, scientific institutions and Microsoft specialists
- Strict focus of our engineering and documentation software on the demands and goals of our clients; development of customized software solutions
- Consultation during the course of a project as a significant part of our services

” With the software company X-Visual Technologies we found the proper partner, one that understood our ideas and requirements and was able to implement them in a very practice-oriented manner. “

Mehmet Tugay, Team Leader Systems Training, Dürr Systems GmbH

„Our solution partners show a high technical competence and capability for innovation. By the application and linkage of the latest Microsoft technologies X-Visual develops sophisticated and integrated solutions for the construction of process plants.“

Florian Müller, Product Marketing Manager Project & Visio, Microsoft Deutschland GmbH

### Our Clients

The areas of application of our software solution are the planning and documentation of process plants. Wherever media are transported. Visual PlantEngineer can be applied with significant benefit. Our clients are process plant designers, builders and operators in the water treatment, pharmaceutical and chemical, automotive and environmental industries, as well as in other branches of process engineering.

Our software is used not only by engineers and technicians, but in the technical drawing department, and by sales representatives.

### Our Solution

The application Visual PlantEngineer enables you to create complex piping & instrumentation diagrams (P&IDs) satisfying ISO 10628 and to manage projects with very large amounts of data both clearly and optimally. All project members access a common source of data. You can create customized reports in Excel<sup>®</sup> and technical documentation in Word. The intuitive Microsoft Office<sup>®</sup> user interface ensures user-friendly operation, with no knowledge of CAD required. Last but not least, there is the smooth integration into the IT structure of your company. Visual PlantEngineer is used successfully throughout the world, providing greater transparency and efficiency in the engineering and documentation process thanks to standardization of the workflow.
